

C.A.F.E. IOWA CAN

There is no safe level of exposure to tobacco smoke. The U.S. Surgeon General has concluded secondhand smoke “is a cause of disease, including lung cancer, in healthy non-smokers.” Studies have shown childhood exposure to secondhand smoke increases risk of developing cancer as an adult.

We, the undersigned, support the right of cities and counties to protect the health of their citizens by passing clean indoor air ordinances for public places.
